

A microscopic image of neurons, likely from a mouse brain, showing a dense network of cells. The neurons are stained with a blue dye, possibly DAPI, which highlights the nuclei. Some neurons also show green fluorescence, likely from a specific marker or protein. The background is dark, making the bright blue and green structures stand out.

April 1st, 2025

A Journey Through Neurons and Neurogenesis: A symposium in memory of Isabelle Caillé

at Sorbonne Université UPMC campus

IBPS - Bâtiment C, room C404
